29/6/2026

Calls for proposals: talent, research and innovation

We offer financial support for health and biomedicine projects through different philanthropic calls for scientific talent, research and innovation in Spain and Portugal.

- **Doctoral INPhINIT fellowships** for talented young researchers who wish to pursue a doctoral studies
- **Postdoctoral Junior Leader fellowships** for researchers of any nationality
- **CaixaResearch health call** for biomedical research projects on oncology, neuroscience, cardiovascular and infectious diseases
- **CaixaResearch innovation call** to transfer scientific knowledge to society and encourages the creation of new products, services and companies related to life sciences

Support to research centres

We collaborate with research centers and hospitals to generate new scientific knowledge.

IrsiCaixa
Institut de Recerca de la Sida

ISGlobal **Barcelona**
Institute for Global Health

VHIO
VALL D'HEBRON
Institute of Oncology

barcelonaBeta
Brain Research Center

GIMM
Gulbenkian Institute for Molecular Medicine

SJD **Sant Joan de Déu**
Fundació de Recerca

cnic
Foundation for Science, Health and Education

cnio
CONSEJO SUPERIOR DE INVESTIGACIONES CIENTÍFICAS

CRG
Centre for Genome Regulation

CLÍNICA
HOSPITAL UNIVERSITARI

IGTP
Instituto de Genética y Terapias

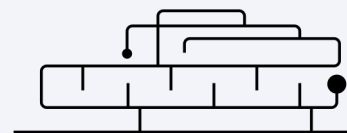

IDIBAPS
Institut d'Investigacions Biomèdiques August Pi i Suñer

Vall d'Hebron
Institut de Recerca

CaixaResearch Institute

We plan a Research Institute based in new facilities in Barcelona, which will include 20,000 m² of space for laboratory research focused on immunology.

CaixaResearch Institute

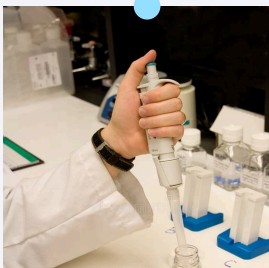

- / Creation of the **first Spanish centre** dedicated to the **key transversal field** of **immunology of diseases**.
- / Fostering **translation** and the advancement of **life science technologies**, with a **multidisciplinary mindset**.
- / **Attracting new talent** and **positioning Spain** at the forefront of **Immunology research**.
- / Working in **synergy and complementarity** to the existing Catalan and Iberian biomedical ecosystem.

Evolving Research Practices

/ Natural Shift Toward Less Manual Work

Designed to naturally evolve from conventional, manual lab practices toward more integrated, platform-based research

Modular spaces easily adapt to new technologies and research needs

/ Encouraged Platform Use

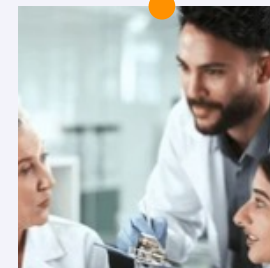

Models and processes will promote greater reliance on shared scientific platforms for efficiency, quality, digital traceability, and scalability.

Centralized platforms optimize costs and maximize return on investment

/ Focus on Science and Impact

Focus on ideas and interpretation, while platforms enhance consistency and overall research value.

Automation and shared resources free researchers for higher-value work

Today's metadata becomes tomorrow's scientific value.

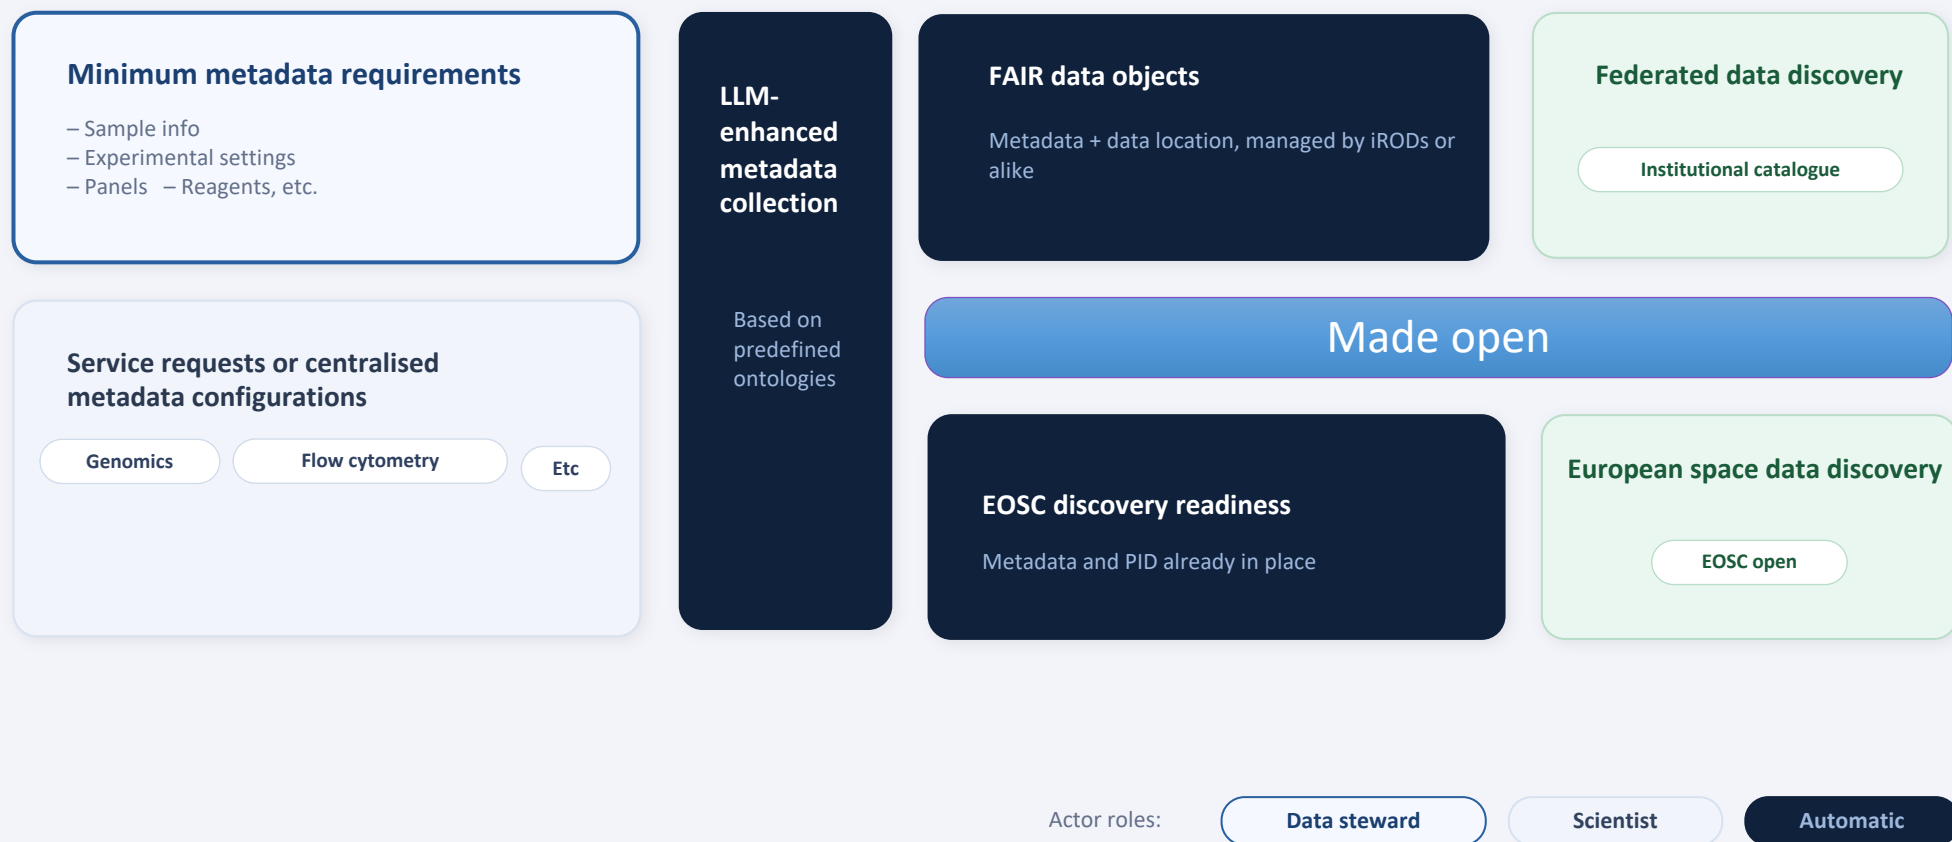

Platforms already collect the essential context needed to deliver services.

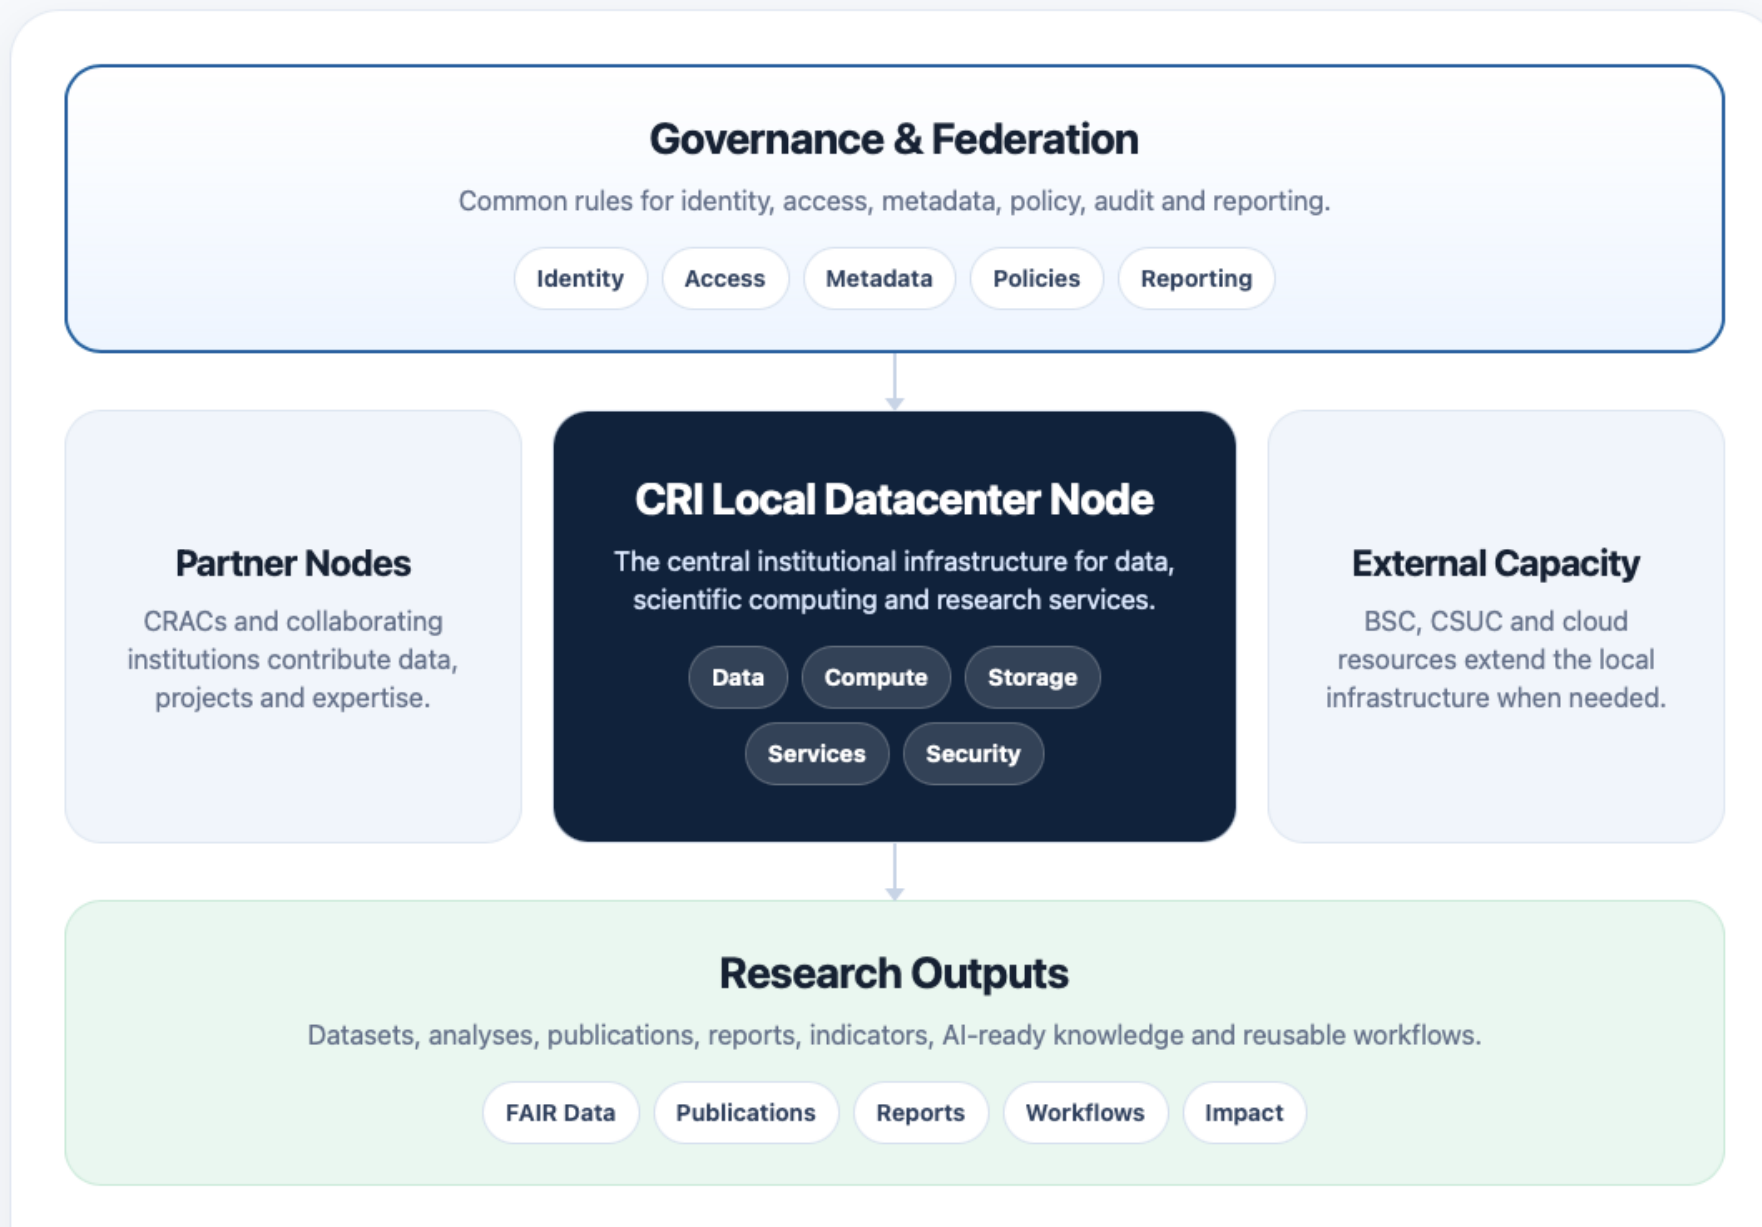

By structuring this information from the start, we turn operational metadata into reusable, AI-ready and FAIR data assets.

This enables better reproducibility, smarter reuse, federated discovery and long-term scientific value.

Example for flow cytometry metadata ingestion and downstream workflow

CaixaResearch Institute
"la Caixa" Foundation
